

# Adjustable Sink Support System

**Fits standard 36" wide cabinet boxes**

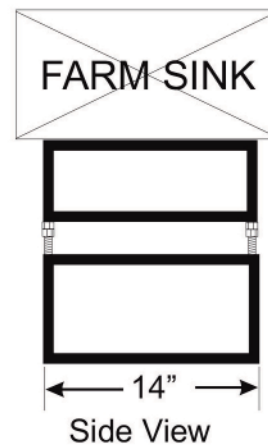

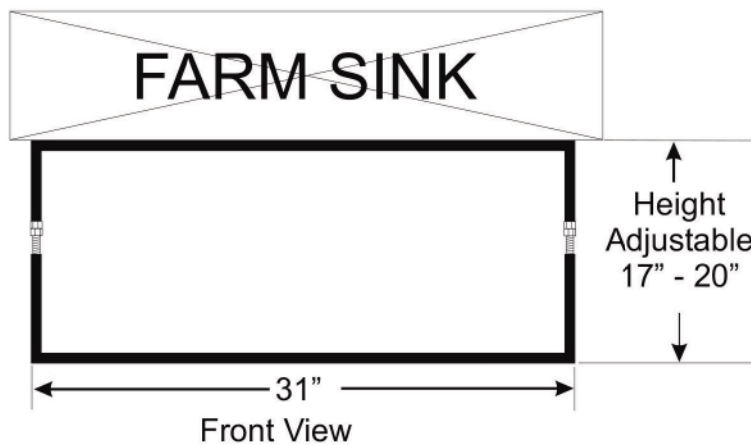

**Works for any undermount or apron front sink.**

**Adjustable, Strong & Space-saving**

The Farm Sink Adjustable Support System is easily placed into the bottom of the cabinet base through the opening in the countertop for the sink. The system is made of rigid 1" box tube steel. The adjustable system used to raise the sink vessel into position under the countertop is comprised of ½" threaded rod with two nuts. The top nut is used to raise or lower the sink, while the second nut locks the position of the frame.

The Farm Sink Adjustable Support System provides simple installation for apron or undermount sinks up to 225-250 lb. The adjustable height allows for varying sink depths and silicone placement on the rim of the sink before raising the vessel up to the countertop. Balanced support is provided to strengthen the base of the sink. The minimal size of the support system saves space under the cabinet to maintain maximum storage capability and clearance for all plumbing and garbage disposals.

## Sink Support System

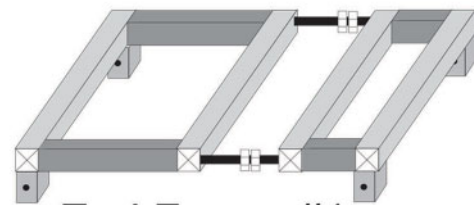

(4) 29" tubes

(8) Bolts

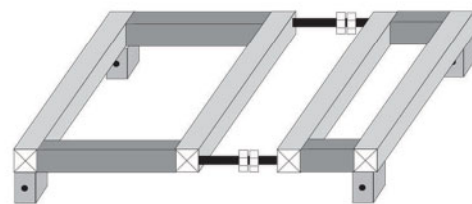

(8) Nuts

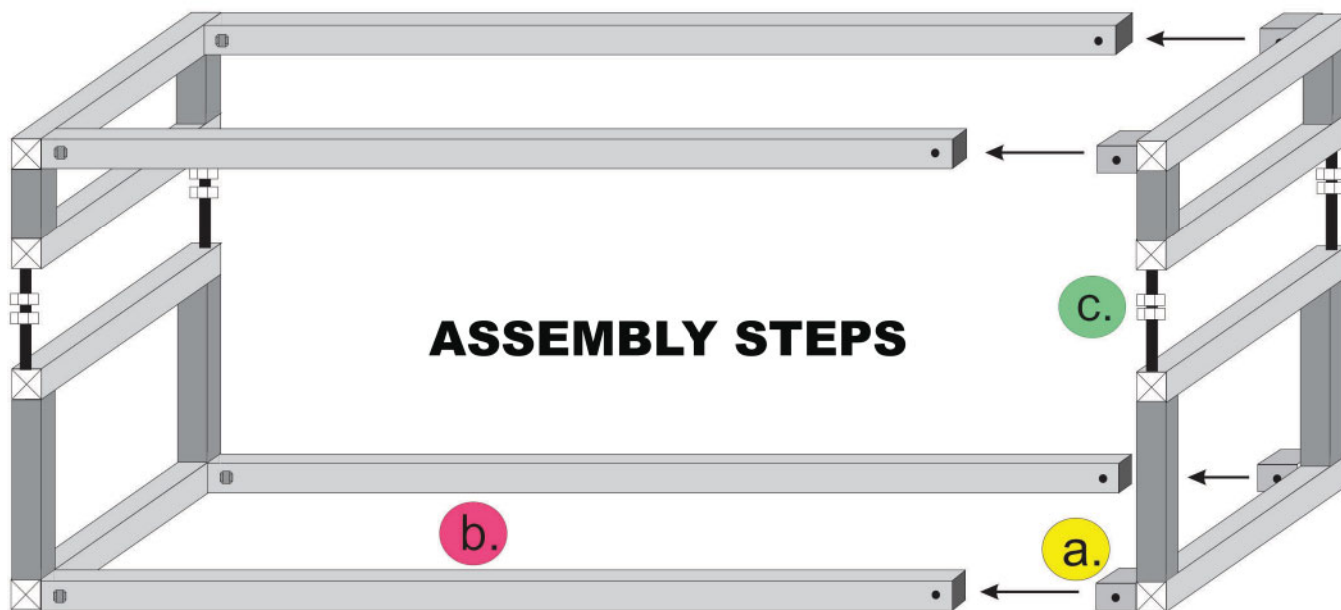

## COMPONENTS

End Frame #1

End Frame #2

## ASSEMBLY STEPS

1. The short stud **a.** on the end frame inserts into the 29" cross tube **b.** to connect both end frames.
2. A bolt & nut are inserted through the holes aligned in the 29" cross tube and the end frame stud.
3. The upper frame is adjustable up or down by turning the top nut **c.** on the threaded rod between the upper assembly and lower assembly.
4. The lower nut on the vertical threaded rod is used to lock the upper nut into position by tightening it up to the bottom of the upper nut.
5. The entire system can be assembled in the cabinet if the space is limited to insert the pre-assembled system in the cabinet.
